INTERMEDIATE IMPORTING DATA IN PYTHON

APIs and interacting with the world wide web

INTERMEDIATE IMPORTING DATA IN PYTHON

Herein, you'll learn

- What APIs are
- Why APIs are important
- In the exercises:
 - Connecting to APIs
 - Pulling data from APIs
 - Parsing data from APIs

What is an API?

- Set of protocols and routines
- Bunch of code
 - Allows two software programs to communicate with each other

API

Connecting to an API in Python

```
import requests
url = 'http://www.omdbapi.com/?t=hackers'
r = requests.get(url)
json_data = r.json()
for key, value in json_data.items():
    print(key + ': ', value)
```

What was that URL?

- http - making an HTTP request
- www.omdbapi.com - querying the OMDB API
- `?t=hackers`
 - Query string
 - Return data for a movie with title (t) 'Hackers'

```
'http://www.omdbapi.com/?t=hackers'
```

OMDb API

Usage

Send all data requests to:

`http://www.omdbapi.com/?`

OMDb API

Usage

Parameters

By ID or Title

Parameter	Required	Valid Options	Default Value	Description
i	Optional*		<empty>	A valid IMDb ID (e.g. tt1285016)
t	Optional*		<empty>	Movie title to search for.
type	No	movie, series, episode	<empty>	Type of result to return.

It's a regular URL!
